# VETV Ramps Up Production Power with Scale Logic Genesis NX2

Scale Logic Inc. – a creative and customer-centric data asset management partner to hundreds of businesses worldwide – is proud to support VETV by donating a Genesis ZX NAS and file server to the growing multimedia production outlet.

 VETV is a non-profit, non-partisan organization located in Grass Valley, California. The program offers the most professional, real-time, hands-on television production and post-production technical training available. VETV serves veterans of the United States Armed and Uniformed Services and their family members, with a mission of filling the gap in career training for those returning from service, and ultimately improving the lives of veterans and their families.

"We're thrilled that Scale Logic backs up its commitment to U.S. service veterans by providing cutting-edge technology for our production operation." said, Bob Lefcovich, Founder and President for VETV. "Now we've got a ton of storage capacity and a file system that will make it even easier for us to train veterans in the newest technology."

The Genesis ZX is a ZFS-enhanced NAS and file server that will provide VETV with high-performance data storage and file management for its production operations. Genesis ZX delivers software-defined storage for media workflows, with high-available servers, unlimited

snapshots, built-in data protection and petabyte-scale capacity. It is built on Seagate's enterprise-class Exos drives that offers industry-leading performance and highest storage density options. Together this reduces primary storage costs, increases reliability and protects data.
